

Que-1 Create a table called Playlist with columns: id, song_name, artist, genre, and play_count. Insert at least 5 sample records representing your favorite songs from Spotify.

Ans:-

Create Playlist Table:-

```
CREATE TABLE Playlist (  
    id INT AUTO_INCREMENT PRIMARY KEY,  
    song_name VARCHAR(100),  
    artist VARCHAR(100),  
    genre VARCHAR(50),  
    play_count INT  
);
```

Insert 5 Record:-

```
INSERT INTO Playlist (song_name, artist, genre, play_count)  
VALUES  
( 'Blinding Lights', 'The Weeknd', 'Pop', 250),  
( 'Perfect', 'Ed Sheeran', 'Pop', 180),  
( 'Believer', 'Imagine Dragons', 'Rock', 220),  
( 'Shape of You', 'Ed Sheeran', 'Pop', 300),  
( 'Hymn for the Weekend', 'Coldplay', 'Alternative Rock', 150);
```

Que-2. Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.

Ans:-

```
SELECT song_name, artist AS Singer  
FROM Playlist;
```

Que-3.

Write a SELECT query to find all songs in the Playlist table where the genre is 'Pop' and play_count is greater than 100. Sort the results by play_count in descending order.

Ans:-

```
SELECT *  
FROM Playlist  
WHERE genre = 'Pop'  
    AND play_count > 100  
ORDER BY play_count DESC;
```

Que-4.

Use the COUNT aggregate function to find out how many songs in your Playlist table belong to the genre 'Hip-Hop'.

Ans:-

```
SELECT COUNT(*) AS total_hiphop_songs  
FROM Playlist  
WHERE genre = 'Hip-Hop';
```

Que-5.

Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre.

Hint: Use GROUP BY with the SUM function to aggregate play counts by genre.

Ans-

```
SELECT genre,  
       SUM(play_count) AS total_plays  
FROM Playlist  
GROUP BY genre;
```
