

Que-1.

Create a table called Restaurant with columns: id, name, location, and cuisine. Apply NOT NULL constraint to name and location, and make id the PRIMARY KEY.

Ans-

```
CREATE TABLE Restaurant (  
    id INT PRIMARY KEY,  
    name VARCHAR(100) NOT NULL,  
    location VARCHAR(100) NOT NULL,  
    cuisine VARCHAR(50)  
);
```

Que-2.

Create a table called FoodOrder with columns: order_id, restaurant_id, user_id, and order_total. Set order_id as PRIMARY KEY, and add a FOREIGN KEY constraint on restaurant_id referencing Restaurant(id).

Ans-

```
CREATE TABLE FoodOrder (  
    order_id INT PRIMARY KEY,  
    restaurant_id INT,  
    user_id INT,  
    order_total DECIMAL(10,2),  
    FOREIGN KEY (restaurant_id) REFERENCES Restaurant(id)  
);
```

Que-3.

Insert 6 rows into a table called SpotifyUser with columns: user_id, username, email, and subscription_type. Ensure that username is UNIQUE and email is NOT NULL. Hint: Use the UNIQUE and NOT NULL constraints when creating the table.

Ans-

Create Table:-

```
CREATE TABLE SpotifyUser (  
    user_id INT PRIMARY KEY,  
    username VARCHAR(50) UNIQUE,  
    email VARCHAR(100) NOT NULL,  
    subscription_type VARCHAR(20)  
);
```

Insert Record:-

```
INSERT INTO SpotifyUser  
(user_id, username, email, subscription_type)  
VALUES  
(1, 'hasib_music', 'hasib@gmail.com', 'Premium'),  
(2, 'travelbeats', 'travel@gmail.com', 'Free'),  
(3, 'rocklover', 'rock@gmail.com', 'Premium'),
```

```
(4, 'popfan2026', 'popfan@gmail.com', 'Student'),  
(5, 'chillvibes', 'chill@gmail.com', 'Premium'),  
(6, 'nightplayer', 'night@gmail.com', 'Free');
```

Que-4.

Create a VIEW named TopSpendersView that shows usernames and order_total from a FoodOrder table where order_total is greater than 1000.

Ans-

```
CREATE VIEW TopSpendersView AS  
SELECT username, order_total  
FROM FoodOrder  
WHERE order_total > 1000;
```

Que-5.

Write a SQL query to list all users from the TopSpendersView who have spent more than 2000, sorted by order_total descending.

Constraint: Only use the TopSpendersView for your query, not the original FoodOrder table.

Ans-

```
SELECT username,  
       order_total  
FROM TopSpendersView  
WHERE order_total > 2000  
ORDER BY order_total DESC;
```
